# Scaling for text size and symbols

If the display in TightGate-Viewer is too small for you, TightGate-Viewer allows you to customise the view to your own requirements.

The scaling is adjusted as follows:

- Start your TightGate-Viewer.
- Open the settings menu of TightGate-Viewerby pressing the function key **F8** and select the menu item **Settings…** menu item.

- In the settings menu, select the tab **Screen** tab in the settings menu.
- You can now select the menu item **Screen scaling in per cent:** Select your desired resolution. Confirm your selection with the **OK**button in the bottom right-hand corner of the window.

- Then close TightGate-Viewer and start it again.
- The desired scaling is now set and is retained until you change the scaling again using the method described.
